General Dynamics Information Technology

Re: Enterprise Service Lead supporting U.S. Customs and Border Protection

Dear Hiring Team:

The hard part of mission AI modernization is not producing another model or cloud service. It is creating the operating system around the capability: trusted data, explainability, security, human authority, adoption, and evidence that the service is ready to cross into enterprise operations.

That is the work I have repeatedly done in adjacent high-consequence settings. At Vape-Jet, I connect production, quality, engineering, support, customer, ERP, telemetry, and AI-assisted workflows into shared operating mechanisms. Through DudeWorth, I design AI-readiness, agentic workflow, human-review, escalation, evaluation, and governance patterns. At Amazon, I built operating routines in a 24/7 environment supporting approximately five million second-day orders annually. At Compunetics, I led engineering, manufacturing, quality, and technical programs involving DoD and other high-reliability stakeholders.

I would bring GDIT a practical enterprise-service posture: begin with the mission decision, make the data and authority chain explicit, align each capability to the Cloud Migration wave gate, and require explainability, lineage, security, operator readiness, and feedback evidence before operational release. The independent candidate vision at <https://russelldudek.github.io/GeneralDynamics/> makes that reasoning visible through a Cross-Domain Service Airlock and a first-90-day operating plan.

I do not claim prior CBP OIT tenure, an active CBP badge, or inside knowledge of undisclosed CBP processes. I do bring a career of entering complex technical environments, learning the mission from the people doing the work, and installing durable mechanisms that move teams from ambiguity to trusted execution.

I would welcome the opportunity to discuss how this operating approach could help GDIT and CBP turn cloud, data, graph, and AI investments into analyst-facing services that are useful, defensible, and ready for mission operations.

Carpe diem,

Russell Dudek

Enterprise AI & Mission Technology Leader
